Natural Cures For Breast Cancer...

Finally, some real natural cures for breast cancer have recently been uncovered. And best of all... one breast cancer cure is not only extremely powerful, it's available to you completely free!

Breast cancer is a horrific disease that claims the lives of millions of women around the world every year. It has caused many women to become so scared and paranoid about it that some are even opting for mastectomies as a precautionary measure!

**How terrible and sad this is?**
I saw a story the other day where a woman is planning on having a double mastectomy and hysterectomy when she finishes having her last child. Just in case she may get breast cancer or cervical cancer.

**All at the tender age of thirty!**
What’s even worse is if a woman does get breast cancer, the medical options available are essentially useless.

In fact, according to 40 year cancer researcher, Dr Hardin B. Jones, women who refuse conventional treatments (surgery, chemotherapy and radiation) actually live four times longer than women who accept these procedures!

In his studies he found the women who refused treatment for breast cancer lived on average twelve and a half years. Those who accepted treatment only lived an average of three years.

And another cancer researcher, Dr. Maurice Fox, stated after his findings into breast cancer survival rates that... “Those who refused medical procedures had a lower mortality rate than those who submitted.”

You can read more about these shock findings in this article... Chemotherapy Shortens Life Span of Cancer Patients, Study Finds.

**It's Time for The Truth to be Told About Breast Cancer...**
So why would a woman even contemplate going through with a horrendous mastectomy operation or subjecting themselves to harmful chemotherapy or radiation treatments (which promote more cancer anyway).

**The answer is simple...**
Most women don’t even know there are natural cures for breast cancer that actually work!

There doctor isn’t going to tell them, probably because he doesn’t even know himself.
The pharmaceutical companies aren’t going to tell them. They make squillions of dollars every year from their cancer drugs so why would they?

The cancer industry isn’t going to tell them either. There’s so much bias and corruption going on within this establishment at the moment - especially the breast cancer conglomerate - it’s an absolute joke! (Click on this link to read more about the breast cancer industry and what’s really going on... 10 Facts About The Breast Cancer Industry You’re Not Supposed to Know).

So what I would say to any woman who is deciding on any radical (and often irreversible) type of orthodox treatment for breast cancer is this... at least consider natural breast cancer treatments and cures first!

As you will see, alternative cancer treatments are not only being hailed by world renowned experts as better and safer than conventional treatments, they are also backed up by some very strong and sound scientific medical literature.

**Leading Cancer Expert Says... Breast Cancer can be Practically "Wiped Out" by Taking Vitamin D!**

More Powerful Natural Cures For Breast Cancer Revealed...

Vitamin D is only the first of several natural cures for breast cancer that really work. Click on each link below to discover more of the most phenomenal breast cancer cures, that sadly, for censorship reasons (and sold out to the "Medical Mafia" reasons) you just don't hear about in the mainstream news...

Top of page^
Jim first discovered the amazing healing powers of the baking soda and maple syrup remedy back in the mid 1970’s, whilst helping a family of women all struck down with breast cancer...

“There were five sisters in the family and all of them passed away from the big 'C' by age 50 – except one” he says.

“I asked if there was anything different in her diet. She told me she was partial to sipping maple syrup and baking soda”.

“I figured, let me try it out on some of my other patients”.

Over the years Jim has given his remedy to over 200 patients with terminal cancer. Astoundingly, 185 lived 15 years or more and nearly half actually had their cancers go into complete remission!

As Jim proudly states... “You tell me about another treatment that works that good!”

In our opinion folks, this one is an absolute no brainer. If you have breast cancer, or any type of cancer, then you have nothing to lose and everything to gain by trying this cancer cure. But don’t make the mistake of thinking that just because it’s simple and inexpensive, it doesn’t work. History shows that the simplest treatments are often the most powerful!

"Natural Cures for Breast Cancer" Treatment Method...

So here’s what you need to do.

Combine 1 teaspoon of baking soda with 1½ to 2 teaspoons of B grade maple syrup (or you can use black strap molasses or manuka honey instead) on a desert spoon or table spoon. Mix thoroughly then take on an empty stomach (first thing in the morning and last at night are good times) with one full glass of filtered water. Take twice a day for the first week then increase to three times daily after that. Continue to follow this regimen for 4-6 weeks before resting. You may then repeat the protocol once again after a 4 week rest period.

In addition, all sugars must be completely eliminated from the diet (except for your maple syrup of course) and it’s also crucial that you do not do any physical activity (not even walking if you can help it) for at least 40 minutes after taking your baking soda/maple syrup mixture. This prevents the body from using up the sugars in the maple syrup for energy. This way, they get completely taken in by the cancer cells and not wasted (this is why having your last dose before going to bed is vital). And of course, you must use this treatment in conjunction with as many of the other natural cancer cures we list for maximum benefit.

For more information on how this treatment actually works and the amazing benefits, click on our “natural cancer cures” link here.

A Terrific Breast Cancer Cure Story...

To finish off, here’s an interview with a lady by the name of Patty Kizar from San Diego. When Patty was first diagnosed with breast cancer, she decided not to pursue any of the usual orthodox medical treatments (the cut-burn-poison approach) and instead decided to go with the baking soda cancer treatment. She went to Rome to meet with Dr Simoncini (this guy
continues to have outstanding success with his baking soda protocol) and underwent his treatment.

The big difference between Dr Simoncini’s protocol and the standard baking soda protocol is that he injects a baking soda solution directly into the breast, rather than having the patient drink the solution. We do want to stress though that taking the baking soda and maple syrup everyday still works just as effectively. It just takes a bit longer to kill the cancer.

So if you’re considering using the baking soda and maple syrup protocol (which we strongly suggest you do!), then this interview is definitely worth watching...

Breast cancer cures - The experts reveal why green tea is one of the best breast cancer cures going around...

Natural Cures For Breast Cancer

Green tea is being hailed as one of the "must use" natural cures for breast cancer. Discover why so many cancer experts say this plant is one of the absolute best breast cancer cures on the planet...

Mark my words, green tea is going to go down in history as one of the all-time greatest “cure all’s” ever discovered!

The remarkable health benefits of this food are nothing short of astonishing. It has been found to prevent and treat everything from heart disease to diabetes, and yes... even cancer. But what has scientists really excited at the moment is green tea’s incredible success as a breast cancer treatment and cure.

When you consider that the Japanese drink green tea every day and they also have one of the lowest rates of cancer in the world - especially breast cancer in women - it's certainly no coincidence. They also hold the enviable title of being the longest lived culture in the industrialized world!

Natural Cures for Breast Cancer - The Science Behind Green Tea's Success...

So why exactly is green tea such a wonderful treatment and natural cure for breast cancer? Well, it contains some of the most potent antioxidants of any food. These antioxidants, known as catechins, or EGCG's, are 100 times more powerful at scavenging and neutralizing free radicals in the body than vitamin C and vitamin E (which were once thought to be the strongest available). It's now common knowledge that free radicals damage our cells and DNA and are one of the major causes of cancer. What's more, certain natural chemicals contained in green tea have also been found to not only prevent cancers from forming, but also slow and even reverse tumor growth. In fact, in every study so far that has been performed involving green tea and breast cancer reduction, it hasn't failed once!!
Professional Opinions on Green Tea and Breast Cancer Cures...

We can go on about the fantastic benefits of green tea for breast cancer patients. But instead, let’s listen to the experts talk about why green tea really is one of the best natural cures for breast cancer going around. Their terrific knowledge and wisdom in the natural health and medicine fields definitely make them worth listening to...

))== Green tea is the most popular tea in China and Japan, where the lowest breast cancer rates are found. There are many health-promoting properties to green tea, and thousands of published studies verifying its benefits. Tea is generally high in antioxidants, but green tea is highest. Green tea is the least processed of all teas (green tea leaves are simply steamed). Oolong tea has some antioxidant effect, but lower levels than green tea, and black tea has the lowest levels of the three. – The Natural Hormone Makeover: 10 Steps to Rejuvenate Your Health and Rediscover Your Inner Glow by Phuli Cohan

♦ In a study published in 1998, Japanese researchers investigated the effects of drinking green tea on the progression of breast cancer. The study involved 472 patients with stage I, II, and III breast cancer. The results showed that increased consumption of green tea was linked to a decrease in the spread of breast cancer in premenopausal women. In a follow-up study, the researchers found that increased consumption of green tea was correlated with decreased recurrence of stage I and II breast cancer. – The New Encyclopedia of Vitamins, Minerals, Supplements and Herbs by Nicola Reavley

♦ Epidemiologists suggested a link between green tea and a lower risk of breast cancer after noticing that the risk of breast cancer in Japanese women who moved to the United States and adopted an American diet quickly rose from the very low risk for women in Japan to the much higher risk of an average American woman. It seems to follow that American women could lower their chances of becoming breast cancer statistics by emulating Japanese women and including green tea in their diets. – The Green Tea Book by Lester A. Mitscher and Victoria Toews

♦ In test tube studies, green tea shut down the tumor promoters involved in breast cancer. Green tea inhibits the formation of cancer-causing agents in the stomach, including nitrosamines. The anti-cancer properties of green tea include: Immune stimulant. Inhibits platelet adhesion, and possibly metastasis. Antioxidant which protects immune cells for a high tumor kill rate while protecting the valuable prostaglandin PGE-1. Inhibits metastasis. Inhibits the breakdown of connective tissue via collagenase, which is the primary mechanism for the spreading of cancer cells. – Beating Cancer with Nutrition by Patrick Quillin, PhD, RD, CNS

♦ Ordinary black or green tea, drunk in ordinary amounts, checks the initiation, promotion, and growth of breast cancer (and eight other cancers including lung and liver). Every cup of tea contains antimutagenic, anti-cancer tannins (green tea has twice the tannins of black) and antioxidant, anti-cancer polyphenols (especially epigallocatechin gallate). – Breast Cancer? Breast Health! The Wise Woman Way by Susun S. Weed

♦ When a person at high risk for breast cancer eliminates cancer-causing chemicals from her foods and home environment, and she adds garlic, broccoli, green tea, trace minerals, vitamin D, fish oils and shifts to a plant-based diet, her “high risk” breast cancer never
emerges. Why? Because it can’t. She’s following an anti-cancer lifestyle. She’ll never express breast cancer, even if her mother did. – *Natural Health Solutions by Mike Adams*

There’s good news for women who regularly drink green tea. Five or more cups a day could mean you have a better chance of surviving breast cancer. In addition, if your doctor discovers the cancer in an early stage, it’s less likely to spread to lymph nodes. More than eight cups a day, for postmenopausal women, might mean even extra protection. Overall, green tea drinkers are more likely to have types of cancer that respond to medical treatment, and are less likely to get cancer again than other women. – *Eat and Heal (Foods That Can Prevent or Cure Many Common Ailments) by the Editors of FC&A Medical Publishing*

Even five cups of green tea a day has been shown to delay the onset of breast cancer. Researchers now suggest green tea, by virtue of its ability to inhibit TNF (tumor necrosis factor), could be used before the onset of cancer as well as during and after conventional cancer treatment. [J Cancer Res Clinical Oncology 125: 589-97, 1999] Green tea extracts (0.1%) added to drinking water of animals has been shown to block TNF production in animals. N-acetyl Cysteine (NAC), a sulphur-based amino acid sold in health food stores, has been shown to reduce TNF. – *You Don’t Have to be Afraid of Cancer Anymore by Bill Sardi*

Concerning breast cancer: In vitro studies show that green tea extracts inhibit the growth of mammary cancer cell lines. Their primary mode of action is to inhibit the interaction of tumor promoters, hormones, and growth factors with their receptors: a kind of sealing-off effect. This effect would account for the reversible growth arrest noted in the in vitro studies. – *The Healing Power of Herbs: The Enlightened Person’s Guide to the Wonders of Medicinal Plants by Michael T. Murray, N.D.*

The polyphenols in green tea occupy many of the sites on the exteriors of cells that otherwise would receive estrogen. This keeps the cells from receiving estrogen, reducing the effects of estrogen on the body. This stops estrogen from stimulating growth of cells in breast, ovarian, and uterine cancer. A number of animal studies have shown that the polyphenols in green tea may offer significant protection against cancers of the pancreas, colon, stomach, lung, and small intestine, – *Prescription for Herbal Healing: An Easy-to-Use A-Z Reference to Hundreds of Common Disorders and Their Herbal Remedies by Phyllis A. Balch, CNC*

All quotes are available and sourced from this link Green tea and breast cancer prevention: What the experts say

---

...So be sure to make green tea an integral part of your "natural cures for breast cancer" prescription.

In fact, be sure to make it part of your prescription for overall good health and longevity!

Breast cancer treatments - Fish oil supplementation is a super potent cure for breast cancer (when done correctly!)

**Natural Cures For Breast Cancer**

Fish oil is at the top of the list of natural cures for breast cancer. Find out why this food is so important for breast cancer treatment and prevention in women...

The best way to beat breast cancer is of course, to prevent it from occurring. And one of the best ways to do this is to consume fish oil. But even if you have the disease, fish oil can still help immensely.

Researchers from the Fred Hutchinson Cancer Research Centre in Seattle, Washington discovered that by females simply taking fish oil every day, they will reduce their risk of developing breast cancer by 32%.

Senior researcher, Dr Emily White, said after the study...

It is biologically plausible that fish oil could affect breast cancer development. Fish oil is known to have anti-inflammatory effects, and chronic inflammation in the body is thought to play a role in the growth and spread of cancer cells.

Fish oil contains the omega-3 fatty acids eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA), which have been well documented for their incredibly strong anti-inflammatory and anti-cancer benefits.

The best type of oils to take are a combination of fish oil and cod liver oil. This way, you get your essential fatty acids along with receiving extra vitamin D. In addition, you can also eat tuna, salmon or sardines (if you like them) every day as well for extra omega 3's.

**More Evidence of Fish Oils Amazing Ability to Halt Breast Cancer...**

For extra validation, here are a couple of quotes from two highly respected natural health authors on the reasons why omega-3 fish oils are one of the best natural cures for breast cancer...

Omega-3 fatty acids from salmon, sardines, mackerel, menhaden, and tuna fight breast cancer by reducing inflammation (blocking eico-sanoid biosynthesis), blocking the growth enhancing effects of sex hormones, inhibiting metastasis, blocking blood vessel growth in cancer cells, and helping premalignant cells revert to the normal state. Omega-3 helps sensitize cancer cells to radiotherapy and chemotherapeutic drugs.

Omega-3 fatty acids appear to reduce PGE2-induced inflammation, inhibit tumor cell proliferation, and enhance immune system function, as demonstrated in a study in which omega-3 fatty acids slowed or delayed the development of metastases in breast cancer patients. Specifically, women who had high fatty tissue content of alpha-linolenic acid (the main omega-3 EFA) were five times less likely to develop metastases than women with a low content.
**Natural Cures for Breast Cancer - The Dosage You Will Need to Take...**

**So be sure to supplement** with [fish oil](http://www.life-saving-naturalcures-and-naturalremedies.com/natural-cures-for-breast-cancer-fish-oil.html#sthash.DDIMjZr0.dpuf) and [cod liver oil](http://www.life-saving-naturalcures-and-naturalremedies.com/natural-cures-for-breast-cancer-fish-oil.html#sthash.DDIMjZr0.dpuf) every day as one of your breast cancer treatments. But remember this though, you will need to take at least ten 1000 mg capsules (10,000 mg's in total) of fish oil per day and 4-6 cod liver oil capsules a day if you want to treat breast cancer.

**Breast cancer cure - Cannabis oil and retinoic acid are the recently discovered breast cancer cures that have researchers extremely excited...**

**Natural Cures For Breast Cancer...**

Cannabis oil and retinoic acid are two potent natural cures for breast cancer that are showing great promise in regards to beating this dreaded disease.

Here's why you need to be supplementing with this powerful medicinal plant and recently discovered nutrient...

**Cannabis Oil:** Let's first begin with cannabis and cannabis oil, because this amazing plant is one of the greatest breast cancer treatments and cures of the last 1000 years! Yes I know that's a huge statement, but it's 100% true. Cannabinoids, and in particular, cannabidiol (CBD) have been found to actually switch off the gene responsible for metastasis in one of the most aggressive forms of breast cancer known as "triple negative". What's more, it does this with absolutely zero side effects (know of any pharmaceutical drugs that can do this. I sure don't!).

Cells from this particular form of cancer are known to have high amounts of ID-1. When researchers exposed infected cancer cells to cannabidiol (CBD) they were astounded to find that these cells quickly returned to a normal, healthy state. They discovered that another cannabinoid - cannabidiolic acid (CBDa) - also stops breast cancer cell migration (stops them from spreading and multiplying out of control).

And it's not just breast cancer that hemp oil can help with either. Researcher, Pierre Despre, stated... "We started by researching breast cancer, but now we've found that cannabidiol works with many kinds of aggressive cancers - brain, prostate - any kind in which these high levels of ID-1 are present".

The fact is, science has still only scratched the surface of what this miracle plant can do. If you have breast cancer, then it would be wise to look into this cure more deeply. We recommend you start with the basics. Watch well-known hemp oil advocate and expert Rick Simpsons...
incredible documentary "Run From the Cure" first if you haven't already done so. You can view the full version below.

Also read the article "Cannabis Oil Cures Breast Cancer" from the link below and be sure to take the time to browse their website... cannabiscure.

Ladies (or men), this is one of the most important and powerful natural cures for breast cancer you will ever find. Don't pass it up or blow it off just because it's considered socially unacceptable (and we aren't talking about smoking the stuff anyway). We advise you do your research first and forget about what other people will think.

In this instance, your health is way more important!

---

**Important Final Note:** If cannabis is not "legal" in your particular state or territory, or you're not comfortable taking the normal "hallucinogenic" cannabis oil, you can still purchase potent and legal forms of help oil that contain the CBD and CBDA cannabinoids (the same ones from the study above). These oils are much the same as the oil Rick Simpson talks about and makes himself, except they've had the THC (hallucinogenic) cannabinoid removed to make them legal. Here's a very reputable and trustworthy supplier if you're interested... High Strength CBD Hemp Oil

---

**Retinoic Acid:** Now we have retinoic acid, which is actually a derivative of pro-vitamin A. As far as breast cancer cures and treatments go, it’s also making huge headlines!

In fact, in regards to breast cancer, one study by scientists from the University of Chicago has revealed that retinoic acid can stop and normalize the growth of out-of-control cells.

**As health writer, S. L. Baker says...**

According to the American Cancer Society, estrogen fuels the growth of two out of three breast cancers. The female hormone can spur on cancer by altering the expression of certain genes, resulting in breast cells that become malignant and proliferate. The University of Chicago study found that retinoic acid can also alter these same estrogen-sensitive genes. But instead of causing cells to grow without restraint, a hallmark of cancer, retinoic acid restored normal balance to the cells and inhibited their growth.

In addition to this research, there have been plenty of earlier studies done on retinoic acid and cancer, with the results being just as impressive. At the moment, it's being used with great success as a remedy and treatment for a rare form of leukemia.

**Natural Cures for Breast Cancer - Even More Health Benefits From Retinoic Acid...**

With the latest study, researchers also discovered another way in which vitamin A, or retinoic acid, could help women to conquer breast cancer...
Certain genes contained in many malignant breast tumors don’t have any estrogen receptors. This means anti-estrogen drugs are essentially useless and the resulting prognosis for these types of breast cancers (double or triple negative breast cancers) is very poor. But by using retinoic acid they found that the cancerous cells did in fact respond positively to the treatment. So vitamin A may actually be a viable treatment for these types of breast cancers.
